Assess Disease Risk in Your Field and Develop a Peanut Rx

This worksheet will lead you through the four-step process of determining your disease risk level in order to customize a Peanut Rx[™] for your individual field using the reverse side of this worksheet and with the assistance of your Syngenta representative.

For each of the risk index factors, identify which option best describes the situation for your field and add the index value associated with each choice to obtain your overall disease risk value. This worksheet does not contain all of the varieties included in the 2016 Peanut Rx or the notes that accompany each factor. To view the complete 2016 Peanut Rx, visit the University of Georgia peanut website at **www.ugapeanuts.com**.

Step 1: Assess Your Disease Risk

Variety Selection				
Variety ¹	Spotted Wilt Points	Leaf Spot Points	Soilborne Disease Points White Mold	
Bailev ³	10	15	10	
Florida-07 ²	10	20	15	
Florida Fancv ²	25	20	20	
FloRun TM '1072	20	25		0
Georgia-06G	10	20		-
Georgia-000	10	20	20 15	
Georgia-09B ²	20	25	25	
Georgia-03B	5	15	10	
Georgia-13M1,2	10	30	25	
Georgia-14N ^{1,2,4}	10	15	15	
Georgia Green	30	20	25	
Georgia Greener ³	10	20	20	
Tifguard ⁴	10	15	15	
TUFRunner™ '297'1,2	15	25	20	
TUFRunner™ '727'2	20	15	15	
TUFRunner™ '511' ^{1,2}	20	30	15	
Planting Date	20	00		<u> </u>
.	Spotted Wilt	Leaf Spot	Soilborne Di	sease Points
Peanuts are planted:	Points	Points	White Mold	Limb Rot
Prior to May 1	30	0	10	O O
May 1 to May 10	15	0	5	0
May 11 to May 31	5	5	0	0
June 1 to June 10	10	10	0	5
After June 10	15	10	0	5
Plant Population (final s			U	3
Flant Fopulation (ililai s			Cailleanna Di	sease Points
Plant stand:	Spotted Wilt Points	Leaf Spot Points	White Mold	Limb Rot

•	Cnotted Mills		Soilborne Disease Points White Mold Limb Rot	
Tillage type	Spotted Wilt Points	Leaf Spot Points		
Tillage type Conventional				

Classic® Herbicide				
Classic usage	Spotted Wilt Points	Leaf Spot Points	Soilborne Di White Mold	sease Points Limb Rot
Classic applied	5	NA	NA	NA
No Classic applied	0	NA	NA	NA
Crop Rotation (with a non	-legume crop)		
Years between peanut crop	Spotted Wilt Points	Leaf Spot Points	Soilborne Disease Points White Mold Limb Rot	
0	NA	25	25	20
1	NA	15	20	15
2	NA	10	10	10
3 or more	NA	5	5	5
Field History				
Have you had a problem controlling these diseases?	Spotted Wilt Points	Leaf Spot	Soilborne Disease Point White Mold Limb Ro	
No	NA	0	0	0
Yes	NA	10	15	10
Irrigation				
Does the field	Spotted Wilt	Leaf Spot	Soilborne Disease Points	
receive irrigation?	Points	Points	White Mold	Limb Rot
No	NA	0	0	0
Yes	NA	10	5	10

Adequate research data is not available for all varieties with regards to all diseases. Additional varieties will be included as data to support the assignment of an index value are available.

Step 2: Calculate Your Severity Points

Fill in the following table to calculate your severity points for each of the four major peanut diseases given the 10 determining factors. Total each column to establish your disease index values.

	Spotted Wilt	Leaf Spot	White Mold	Rhizoctonia Limb Rot
Variety				
Planting Date				
Plant Population				
At-plant Insecticide				
Row Pattern				
Tillage				
Classic Herbicide				
Crop Rotation				
Field History				
Irrigation				
Your Total Index Value				

Step 3: Interpret Your Index Values

Once you've calculated your index values, utilize the following information to interpret your risk level situation.

	Spotted Wilt	Leaf Spot	White Mold	Rhizoctonia Limb Rot
Low Risk	≤ 65	10-35	10-25	TBD
Moderate Risk	70-110	40-60	30-50	TBD
High Risk	≥ 115	65-100	55-80	TBD

When tomato spotted wilt virus incidence is high statewide or in your region, even fields with a low risk level may experience significant losses. Consider the following recommendations to reduce your spotted wilt risk level:

- Use less susceptible varieties
- Adjust your planting date
- Consult the complete Peanut Rx for additional options that may also provide limited benefit

Step 4: Develop Your Peanut Rx

Once you have calculated your total risk for each fungal disease, utilize the most conservative fungicide program as your guide for customizing a per-field prescription spray program with the assistance of your Syngenta representative. Syngenta-recommended fungicide spray programs for each risk level are included on the reverse side of this worksheet.

Programs developed through the cooperation of

⁻ right nest variety Varieties Georgia Greener and Bailey have increased resistance to *Cylindrocladium* black rot (CBR) than do other varieties commonly planted in Georgia.

⁴ Tifguard has excellent resistance to the peanut root-knot nematode.
