

EQUIP SOYBEANS TO BATTLE SEASONAL STRESS WITH QUADRIS TOP SB FUNGICIDE

GREENER FOLIAGE & MORE GROWTH

Enables soybean plants to stay green longer and utilize the sun's energy for longer—prolonged photosynthesis means extended pod development

Quadris Top[®] SB fungicide unlocks the true yield potential in soybeans. This industry-leading fungicide enhances physiological benefits and provides broad-spectrum disease control, making it a vital tool in the mission to enable soybeans to **yield strong** so farmers can **grow more soybeans**.

LARGER BEANS & FULLER PODS

Improves plant growth to increase yield potential

135 pods

296 pods

Each pod pile contains four randomly selected soybean plants from each treatment type

HIGHER YIELD POTENTIAL

Boosts yield an average of 4 to 8 bu/A. In a Mississippi trial, Quadris Top SB-treated soybeans resulted in a 3.2 bu/A advantage over straight strobilurin-treated plants

SOYBEAN YIELDS AFTER A FUNGICIDE APPLICATION

PROTECTION OF NEW PLANT GROWTH

Provides protection throughout the plant via the xylem-systemic mobility

INCREASED DROUGHT TOLERANCE

Reduces the rate of transpiration, allowing for greater tolerance of low moisture and high temperatures

VIGOROUS ROOT SYSTEMS

Vigorous root systems support increased plant growth by improving water and nutrient uptake

CONTROL OF YIELD-ROBBING PESTS

Multiple modes of action provide broad-spectrum disease control

Tank mixes with Endigo[®] ZC insecticide to target yield-robbing diseases and insects

QUADRIS TOP SB: THE KEY TO MAXIMIZING YIELD

Quadris Top SB will help increase yield, maximize return on investment and enable soybean plants to manage environmental stress. Soybeans are able to reach their yield potential because of enhanced plant physiological responses, which enable plants to withstand less-than-ideal environmental conditions, such as drought and high temperatures. The late-season stress protection offered by Quadris Top SB allows soybeans to **yield strong**.

The Quadris Top SB Advantage

- Offers physiological benefits and boosts yield an average of 4 to 8 bu/A
- Impacts plant growth to produce larger beans, fuller pods and improved pod retention for better soybean harvests
- Combines two active ingredients to deliver effective disease control and resistance management
- Shows yield advantages over straight strobilurin chemistries, such as Headline® and Quadris® fungicides, and offers both preventive and curative disease control
- Tank mixes with Endigo® ZC insecticide to target yield-robbing insects, and is proven to enhance yields and provide growers consistent returns

Major Diseases Controlled

- Frogeye leaf spot (*Cercospora sojina*), including strobilurin-resistant strains
- Aerial blight (*Rhizoctonia solani*)
- Alternaria leaf spot (*Alternaria* spp.)
- Anthracnose (*Collectotrichum truncatum*)
- Brown spot (*Septoria glycines*)
- Cercospora blight and leaf spot (*Cercospora kikuchii*)
- Pod and stem leaf blight (*Diaporthe phaseolorum*)
- Powdery mildew (*Microspheera diffusa*)
- Rust (*Phakopsora* spp.)

High-Performance Proof

SYNGENTA ON-FARM TRIAL, MISSISSIPPI

Straight Strobilurin-treated,
52 bu/A

Quadris Top SB-treated,
57 bu/A

In this Mississippi trial, the Quadris Top SB-treated plants remained greener longer, extending photosynthesis. This allowed the fields to better utilize the sun's energy, resulting in a 5 bu/A advantage over the straight strobilurin-treated plants.

The physiological benefits of a Quadris Top SB application enable soybeans to break through the yield barrier. With industry-leading technology from Syngenta, soybeans are able to thrive despite environmental stress and pest pressures, allowing farmers to **grow more soybeans**.
