Residual That Won’t Quit

When challenging weeds cloud your view, look to the next level of long-lasting weed control from Storen™ corn herbicide. Its innovative formulation of four residual active ingredients provides consistently clean rows up to three weeks longer than other leading corn herbicides.*

SEE THE DIFFERENCE WITH STOREN

Even under challenging weather conditions, Storen delivers clean rows and clear results through crop canopy.

*Storen length-of-control advantage based on 2022 Syngenta and university-replicated trials comparing Storen to Resicore® and TriVolt™.

NEXT-LEVEL WEED CONTROL

Storen controls* 74 weeds species, and provides next-level performance on these key weeds.

- Palmer amaranth
- Waterhemp
- Giant ragweed
- Common ragweed
- Morningglory species
- Russian thistle
- Cocklebur
- Barnyardgrass
- Foxtail species

*Control or partial control. See label for details.

In field trials, Storen still provided 93% control of Palmer amaranth and waterhemp 64 days (9+ weeks) after treatment compared to competitive herbicides, when applied in a preemergence application.

- 20% GREATER CONTROL than Resicore®
- 40% GREATER CONTROL than TriVolt™
- 66% GREATER CONTROL than Corvus®
- 48% GREATER CONTROL than SureStart® II

Data Source: 2022; HBI008A4-2022US. Rates tested: Storen 2.4 qts/A, Resicore 3 qts/A, TriVolt 20 fl oz/A, Corvus 5.6 fl oz/A, SureStart II 3 pt/A.
MAXIMUM RESIDUAL CONTROL
Storen outlasts other leading corn herbicides thanks to its four residual active ingredients – Bicyclopyrone, Mesotrione, S-metolachlor and Pyroxasulfone – that work together to deliver the longest-lasting weed control in corn.

STORREN LASTS UP TO THREE WEEKS LONGER

Storen delivers consistently clean rows up to 3 weeks longer¹ than other leading corn herbicides protecting the crop from yield-robbing weeds through canopy resulting in a 4-5 bu/A yield advantage.²

CONSISTENTLY OUTPERFORMS
When you invest in herbicides, you expect clean fields. But 40% of growers say Palmer amaranth and waterhemp are difficult to control with current preemergence corn herbicides.³ That’s because other products are only providing a high level of weed control about half of the time. Storen will help restore your confidence, providing high-level (>95%) weed control 9 out of 10 times.⁴

Storen
>95% weed control
9 out of 10 fields

Resicore
>95% weed control
5 out of 10 fields

Storen delivers unprecedented consistency of control — a higher level of control of more weeds, more often. This means fewer weed escapes, and less weed interference with developing corn plants.

</tbody>
</table>

DO NOT apply Storen on the same acre(s) as Acuron® GT. See label for rates, application methods and timings.

Use Rate

The full application rate of Storen ranges from 2.1-2.4 qt/A for fine and medium soil textures and depends on soil organic matter.

<table>
<thead>
<tr>
<th>Soil Organic Matter</th>

<tr>
<td>&gt; 3%</td>
<td>2.4 qt/A</td>
</tr>
</tbody>
</table>

DO NOT use Storen on coarse soil textures or crop injury may occur.

Crop Safety

Storen is optimized for preemergence and post-emergence crop safety when used according to the label.

- Contains a proven crop safener, Benoxacor, for preemergence crop safety
- Formulated as a ZC (capsule-suspension) liquid that improves crop safety when used in post-emergence applications
