

Recharge Your Roots

After fighting off pathogens like root rot, trunk cankers and *Phytophthora* diseases, trees can be left tired and stressed. Maintaining tree health helps minimize this stress, leading to healthier roots and ultimately higher yield potential.

Orondis® fungicide offers best-in-class protection against soilborne oomycete diseases, like *Phytophthora* root rot and other yield-robbing diseases. The active ingredient in Orondis, oxathiapiprolin, helps develop tree nut root systems by reducing the number of viable *Phytophthora* propagules in the soil. With excellent preventive fungicidal activity and residual disease control, protection from Orondis can improve root mass, facilitate better water and nutrient use, improve root health and ultimately increase yield and profit potential.

Orondis Provides Outstanding Control of *Phytophthora* Root Rot in Almonds

Sweet almond, Nonpareil
 US2GTF1092020; J.A. Adaskaveg, Davis, CA
 Inoculations: *P. citrophthora*, *P. niederhauseri*, *P. cactorum*
 Planted 10/2017, Trt: 14-Dec 2017, 11-Oct 2018, 24-May 2019, 11-Mar 2020

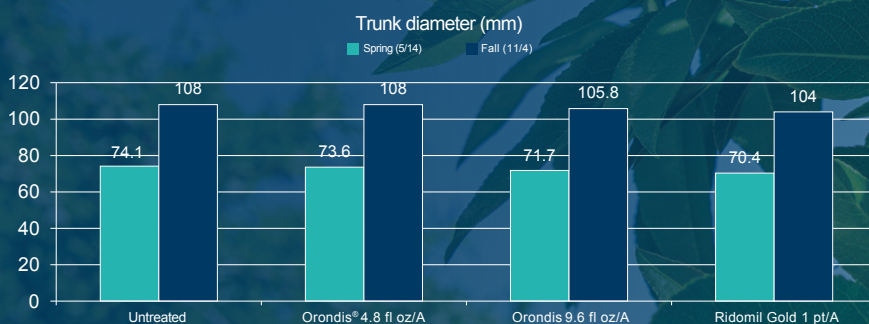

Orondis fungicide:

- Active ingredient: Oxathiapiprolin; FRAC Fungicide Group 49
- Highly effective fungicide for control of Oomycete pathogens
- Unique mode of action targets an oxysterol-binding protein (OSBP) with essential function in fungal cells
- No cross-resistance to other fungicides
- Preventive and residual control

Key Diseases Controlled

- *Phytophthora* crown rot
- *Phytophthora* root rot

Orondis is safe to use in newly planted trees

Sweet almond, Nonpareil
USWC0F0082020: Famoso, CA
Trt: 25-May 2019; 26-Sept 2019; 16-Mar 2020; 17-Sept 2020

Phytophthora spp. infects tree roots and negatively affects the overall health of the tree, impacting both quality and yield potential. The pathogen can move through surface water, soil amendments and even offsite and onsite soil movement. *Phytophthora* spores can persist for years, even when fumigated, so early detection and prevention is vital to your orchard's protection.
